

Installation Guide – Kumfi Tile PVC

- ◆ Start by thoroughly cleaning the area that you intend to cover, removing any dirt or debris.
- ◆ Lay the tiles out in the desired formation and gently tap them together using either your hands or a rubber mallet.
- ◆ If you are attaching bevel edges to the tiles, simply click these into the outer side of the tiles. Please note, if the side of the tile already has connectors, cut off the connectors from the bevel edge as shown, being careful not to damage the peg that is directly behind the connector.
- ◆ For cleaning and maintenance, please refer to the [data sheet](#).
